General Description

Based on flyback topology, the AP3785T EV1 board is designed to serve as an example for high efficiency, cost-effective & components less, flexible power design consumer home appliance systems and charger adopter application. It works under Pulse Frequency Modulation method & employed with a primary side regulated mode, and operating at a Valley switching on region, offering an extreme lower standby input power consumption. Its output power is rated at 15W with 5.0V-3A. This EV1 board meets DOE VI and CoC Tier 2 energy efficiency requirements. An USB Type C connector is at output side for powering & charging any interface related device & system.

Key Features

- 90 ~265V_{AC} universal AC input range
- No required any Opto-Coupler needed & its switching frequency is at 20Khz ~ 80Khz.
- The output drawn current will be depended on ender user device, its max current is 3A.
- By mean of using an integrated within a low Rds-on MosFet APR34309 SR drive IC & as well operating at Valley-on switching mode, so the power supply converting efficiency is improved up to 85% Efficiency.
- During the burst mode operation, the 10mW low standby input power can be achieved.
- Very low start-up operating and quiescent currents
- Soft start during startup process.
- Provide accurate constant voltage regulation (CV mode) & accurate constant current (CC).
- Provide the cable drop compensation and adjustable line voltage compensation.
- Built-in Jittering Frequency function is built in to reduce EMI emission.
- There is a transformer saturation protection via primary peak current limitation.
- Internal Auto Recovery OCP, OVP, OLP, OTP Power Protection, cycle by cycle current limit, also within the DC polarity protection

Applications

- Switching AC-DC Adaptor & Charger
- Power home Appliances systems

Universal AC input type C 5V-3A PSU Specifications (CV & CC mode)

Parameter	Value
Input Voltage	90 to 265V_{AC}
Input standby power	Less than 30 mW
Main output Vo / Io	5V – 3A
Efficiency	>85%
Total Output Power	15W
Protections	OCP, OVP, OLP,OTP
XYZ Dimension	50.40 x 36.0 x 18 mm
ROHS Compliance	Yes
Connector type	Type C 3.0 connector

Evaluation Board Picture: (will be updated)

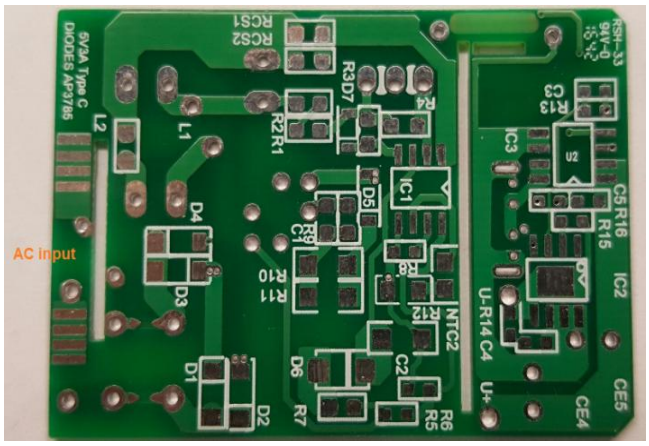

Figure5: PCB Board Layout Bottom View

Quick Start Guide

1. The evaluation board is preset at 5V/3A from side of AC input L ~N and output with Type C connector
2. Ensure that the AC source is switched OFF or disconnected.
3. Connect the AC line wires of power supply to “L and N” on the Left side of the board.
4. Turn on the AC main switch.
5. Measure output at Type C connector 5V+ & 5V-to ensure the voltage is respectively.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

A. Life support devices or systems are devices or systems which:

1. are intended to implant into the body, or

2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.

B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products in such safety-critical, life support devices or systems.
