## Description

The PI3DBS16412 is an 8 to 4 differential channel multiplexer/demultiplexer switch. This solution can switch multiple signal types up to data rate of 20 Gbps . Using a unique design technique, Pericom has been able to minimize the impedance of the switch such that the attenuation observed through the switch is minimal. The unique design technique also offers a layout targeted for USB3.0, USB3.1, 10GE, Thunderbolt 3, and SAS3.0 signals, which minimizes the channel to channel skew as well as channel to channel crosstalk as required by high speed signals.

## Applications

$\rightarrow \quad$ Routing high speed differential signals such as USB3.1 Gen 2, SAS3, PCle4, TB3
