PI3USB3200
3.3V, USB3.1 Gen2 and USB2, 3:2 Mux/DeMux

Description
Diodes’ PI3USB3200 is a 3-to-2 differential channel multiplexer/demultiplexer switch. This solution can switch multiple signal types up to a data rate of 10Gbps. Using a unique design technique, Diodes is able to optimize the impedance and capacitance of the switch where the attenuation observed through the switch is minimal. The wide-input voltage range and protection features enable mixed analog signal design on USB legacy or USB Type-C connector. The unique design technique also offers a layout targeted for USB2.0, USB3.1 signals, which minimizes the channel-to-channel skew as well as channel-to-channel crosstalk as required by high-speed signals.
