

AP7333

300mA, Low Quiescent Current, Fast Transient Low Dropout Linear Regulator

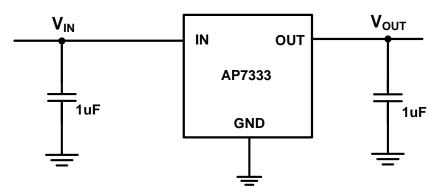

Features

- 300mA Low Dropout Regulator in 3-pin package
- Very low I_Q over full load: $65\mu A$
- Wide input voltage range: 2V to 6V
- Fixed output options: 1.0V to 3.3V
- PSRR: 65dB typical at 100Hz
- Fast start-up time: 80µs
- Stable with low ESR, 1µF ceramic output capacitor
- Excellent Load/Line Transient Response
- Low dropout: 300mV typical at 300mA
- Current limit protection
- Short circuit protection
- Thermal shutdown protection
- Ambient temperature range: -40°C to 85°C
- SOT23 and SOT23R: Available in "Green" Molding Compound (No Br, Sb)
- Lead Free Finish/RoHS Compliant (Note 1)

Applications

- XDSL Router
- Wireless LAN Cards
- Desktop and Notebook Computers
- Battery Powered Equipments
- Mouse, Keyboards

Typical Application Circuit

Description

The AP7333 is a 300mA, fixed output voltage, low dropout linear regulator. The device included pass element, error amplifier, band-gap, current limit and thermal shutdown circuitry.

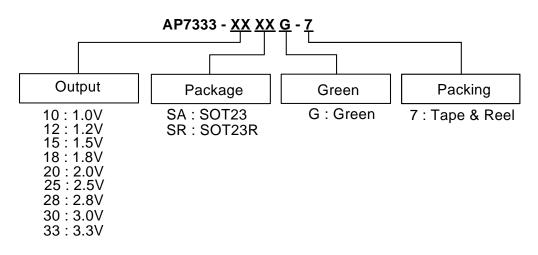

The characteristics of low dropout voltage and low quiescent current make it suitable for low power applications, for example, battery powered devices. The typical quiescent current is approximately 65µA.

Built-in current-limit and thermal-shutdown functions prevent IC from damage in fault conditions.

The AP7333 is available in SOT23 packages with different pin-outs.

Ordering Information

	Device	Baakaga Cada	Packaging	7" Tape ar	nd Reel
	Device	Package Code	(Note 2)	Quantity	Part Number Suffix
PD ,	AP7333-XXSAG-7	SA	SOT23	3000/Tape & Reel	-7
Pb,	AP7333-XXSRG-7	SR	SOT23R	3000/Tape & Reel	-7

Notes: 1. EU Directive 2002/95/EC (RoHS). All applicable RoHS exemptions applied. Please visit our website at http://www.diodes.com/products/lead_free.html

2. Pad layout as shown on Diodes Inc. suggested pad layout document AP02001, which can be found on our website at http://www.diodes.com/datasheets/ap02001.pdf.

Pin Assignment

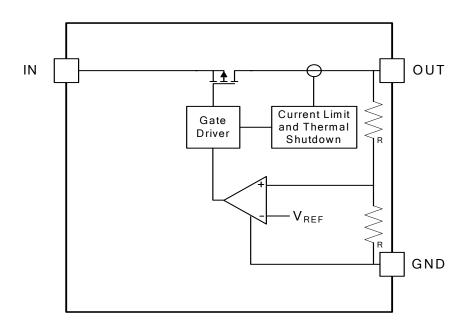

Pin Descriptions

Pin Name	Pin Number		Description	
Fill Name	SOT23	SOT23R	Description	
IN	1	3	Voltage input pin. Bypass to ground through at least 1µF capacitor	
OUT	2	2	Voltage output pin. Bypass to ground through 1µF ceramic capacitor	
GND	3	1	Ground	

Functional Block Diagram

Absolute Maximum Ratings

Symbol	Parameter	Ratings	Units	
ESD HBM	Human Body Model ESD Protection		6	kV
ESD MM	Machine Model ESD Protection		400	V
V _{IN}	Input Voltage		7	V
	Continuous Load Current		Internal Limited	
T _{OP}	Operating Junction Temperature Range		-40 ~ 125	°C
T _{ST}	Storage Temperature Range		-65 ~150	°C
D	Power Dissipation (Note 3)	SOT23	600	mW
PD		SOT23R	540	mW
TJ	Maximum Junction Temperature		150	°C

Recommended Operating Conditions

Symbol	Parameter	Min	Max	Unit
V _{IN}	Input voltage	2	6	V
I _{OUT}	Output Current (Note 4)	0	300	mA
T _A	Operating Ambient Temperature	-40	85	°C

Notes: 3. Ratings apply to ambient temperature at 25°C

4. The device maintains a stable, regulated output voltage without a load current.

Electrical Characteristics

Symbol	Parameter	Test Conditions	Min	Тур.	Max	Unit
	Input Quiescent Current	I _{OUT} = 0mA		55	55 75	
Ι _Q		I _{OUT} = 300mA		65	85	μA
V _{Dropout}	Dropout Voltage (Note 5)	I _{OUT} = 300mA		300	550	mV
V _{OUT}	Output Voltage Accuracy	$T_A = -40^{\circ}$ C to 85°C, $I_{OUT} = 30$ mA	-2		2	%
ΔV_{OUT} / $\Delta V_{IN}/V$	Line Regulation	$V_{IN} = (V_{OUT} + 1V)$ to V_{IN-Max} , $I_{OUT} = 1mA$		0.01	0.20	%/V
ΔV _{OUT} /V _{OUT}	Load Regulation	$V_{IN} = (V_{OUT} + 1V)$ to V_{IN-Max} , I_{OUT} from 1mA to 300mA	-0.6		0.6	%
t _{ST}	Start-up Time	$V_{IN} = 0V$ to 2.0V, $V_{OUT} = 1V$, $I_{OUT} = 300$ mA		80		μs
PSRR	PSRR	$V_{IN} = [V_{OUT} + 1V]V_{DC} + 0.5V_{ppAC},$ f = 100Hz, I _{OUT} = 30mA		65		dB
I _{SHORT}	Short-circuit Current	$V_{IN} = V_{IN-Min}$ to V_{IN-Max} , $V_{OUT} < 0.2V$		100		mA
I _{LIMIT}	Current Limit	$V_{OUT}/R_{OUT} = 1A$	400	600		mA
T _{SHDN}	Thermal Shutdown Threshold			140		О°
T _{HYS}	Thermal Shutdown Hysteresis			15		°C
Δ.,	Thermal Resistance Junction-to-Ambient	SOT23 (Note 6)		207		°C/W
θ_{JA}		SOT23R (Note 6)		230		°C/W

 $(T_A = 25^{\circ}C, V_{IN} = V_{OUT} + 1V, C_{IN} = 1uF, C_{OUT} = 1uF, unless otherwise stated)$

Notes:

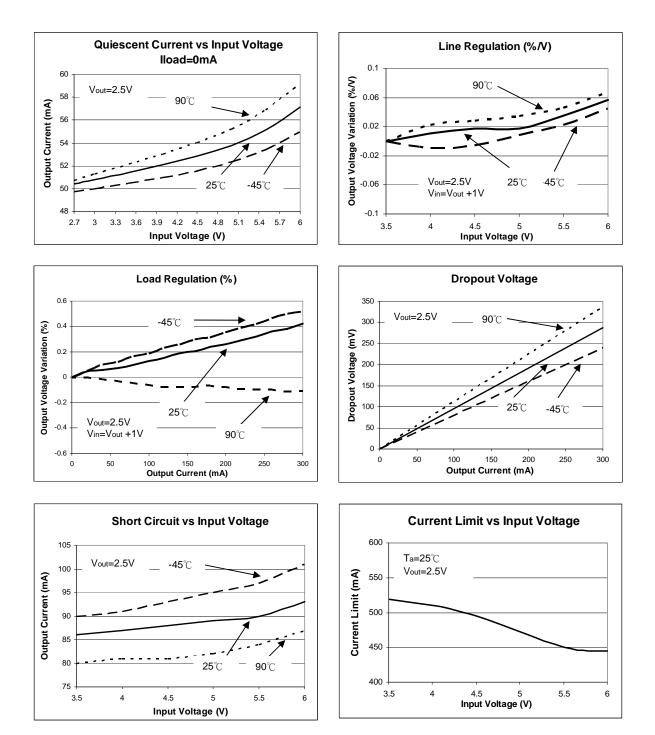

5. Dropout voltage is the voltage difference between the input and the output at which the output voltage drops 2% below its nominal value. This parameter only applies to output voltages above 1.8V.
6. Test conditions for SOT23 and SOT23R: Device mounted on FR-4 substrate PCB, with minimum recommended pad layout, 2oz copper, single sided.

Application Note

Input Capacitor

A 1µF ceramic capacitor is recommended to connect between V_{IN} and GND pins to decouple input power supply glitch and noise. The amount of the capacitance may be increased without limit. This input capacitor must be located as close as possible to the device to assure input stability and less noise. For PCB layout, a wide copper trace is required for both V_{IN} and GND. A lower ESR capacitor allows the use of less capacitance, while higher ESR type requires more capacitance.

Output Capacitor

The output capacitor is required to stabilize and help transient response for LDO. The AP7333 is stable with very small ceramic output capacitors. The recommended capacitance is from 1µF to 4.7µF, Equivalent Series Resistance (ESR) is from 10mΩ to 200mΩ, and temperature characteristic is X7R or X5R. Higher capacitance values help to improve load/line transient response. The output capacitance may be increased to keep low undershoot/overshoot. Place output capacitor as close as possible to OUT and GND pins, and keep the leads as short as possible.

No Load Stability

No minimum load is required to keep the device stable. The device will remain stable and regulated in no load condition.

Current Limit Protection

When output current at OUT pin is higher than current limit threshold, the current limit protection will be triggered and clamp the output current to approximately 600mA to prevent over-current and to protect the regulator from damage due to overheating.

Short Circuit Protection

When OUT pin is short-circuit to GND or OUT pin voltage is less than 200mV, short circuit protection will be triggered and clamp the output current to approximately 100mA. This feature protects the regulator from over-current and damage due to overheating.

Thermal Shutdown Protection

Thermal protection disables the output when the junction temperature rises to approximately +140°C, allowing the device

to cool down. When the junction temperature reduces to approximately +125°C the output circuitry is enabled again. Depending on power dissipation, thermal resistance, and ambient temperature, the thermal protection circuit may cycle on and off. This cycling limits the heat dissipation of the regulator, protecting it from damage due to overheating.

Ultra Fast Start-up

After turned on, the AP7333 is able to provide full power in as little as tens of microseconds, typically 80µs, without sacrificing low ground current. This feature will help load circuitry move in and out of standby mode in real time, eventually extend battery life for mobile phones and other portable devices.

Fast Transient Response

Fast transient response LDOs can also extend battery life. TDMA-based cell phone protocols such as Global System for Mobile Communications (GSM) have a transmit/receive duty factor of only 12.5 percent, enabling power savings by putting much of the baseband circuitry into standby mode in between transmit cycles. In baseband circuits, the load often transitions virtually instantaneously from 100µA to 100mA. To meet this load requirement, the LDO must react very quickly without a large voltage drop or overshoot — a requirement that cannot be met with conventional, general-purpose LDOs.

The AP7333's fast transient response from 0 to 300mA provides stable voltage supply for fast DSP and GSM chipset with fast changing load.

Small Overshoot and Undershoot

The AP7333 has small and controlled overshoot and undershoot in load and line transitions. This helps to protect supplied circuit from damage and operation error caused by glitches. This feature also permits the usage of small value output decoupling capacitor with AP7333.

Low Quiescent Current

The AP7333, consuming only around 65µA for all input range and output loading, provides great power saving in portable and low power applications.

Wide Output Options

The AP7333, with multiples of fixed output voltage options, provides a versatile LDO solution for many portable applications.

LIFE SUPPORT

Diodes Incorporated products are specifically not authorized for use as critical components in life support devices or systems without the express written approval of the Chief Executive Officer of Diodes Incorporated. As used herein:

- A. Life support devices or systems are devices or systems which:
 - 1. are intended to implant into the body, or
 - 2. support or sustain life and whose failure to perform when properly used in accordance with instructions for use provided in the labeling can be reasonably expected to result in significant injury to the user.
- B. A critical component is any component in a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or to affect its safety or effectiveness.

Customers represent that they have all necessary expertise in the safety and regulatory ramifications of their life support devices or systems, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of Diodes Incorporated products in such safety-critical, life support devices or systems, notwithstanding any devices- or systems-related information or support that may be provided by Diodes Incorporated. Further, Customers must fully indemnify Diodes Incorporated and its representatives against any damages arising out of the use of Diodes Incorporated products or systems.
