Description

The DIODES™ D5V0H2U3SO is a dual-voltage suppressor designed to protect components connected to data and transmission lines against electron static discharge (ESD).

The device clamps the voltage just above the logic level supply for positive transients and to a diode drop below ground for negative transients. It may also work as a bidirectional suppressor by connecting only pin 1 to pin 2.

Applications

- Computers and peripherals
- Communication system
- Portable electronics
- Cellular handset and accessories
