Application Note

AP5727 Application Information and Demo Board User Guide

1. Description

The AP5727(Boost) evaluation modules (EVM) provide a means for the user to evaluate quickly the functionality and electrical performance of the AP5727 device. All inputs and outputs are brought out to test points for control and monitoring. All passive components are included on the EVM for device operation. The input pin should be connected to an external supply; the output should be connected to a load.

2. EVM Schematic
