## Tape & Reel

Tape and Reel packing system protects Diodes' products from mechanical and electrical damage and is designed for automatic pick-and-place equipment. Diodes' tape and reel specifications are in compliance with Electronics Industries Association standards for embossed carrier taping of surface mount components for Automatic Handling EIA-481, current version. It consists of a Pocket Carrier Tape sealed with a protective Cover Tape that holds devices in place.

The conductive Carrier Tape and antistatic coated Transparent Cover Tape and Reel provide ESD protection. Products are supplied either on 7-inch or 13-inch diameter reels.

Devices are loaded with leads down into the carrier pockets. For shipping, tape is wound onto a plastic reel for labeling and packing. Barcode labels are placed on each reel. Transparent Cover Tape allows device verification and brand inspection without having to remove or handle components.

# Tape & Reel Materials and Design

**Figure 1: TAPE & REEL LABEL INFORMATION**

**Figure 2: TAPE LEADER AND TRAILER PIN 1 ORIENTATIONS**

## Carrier Tape

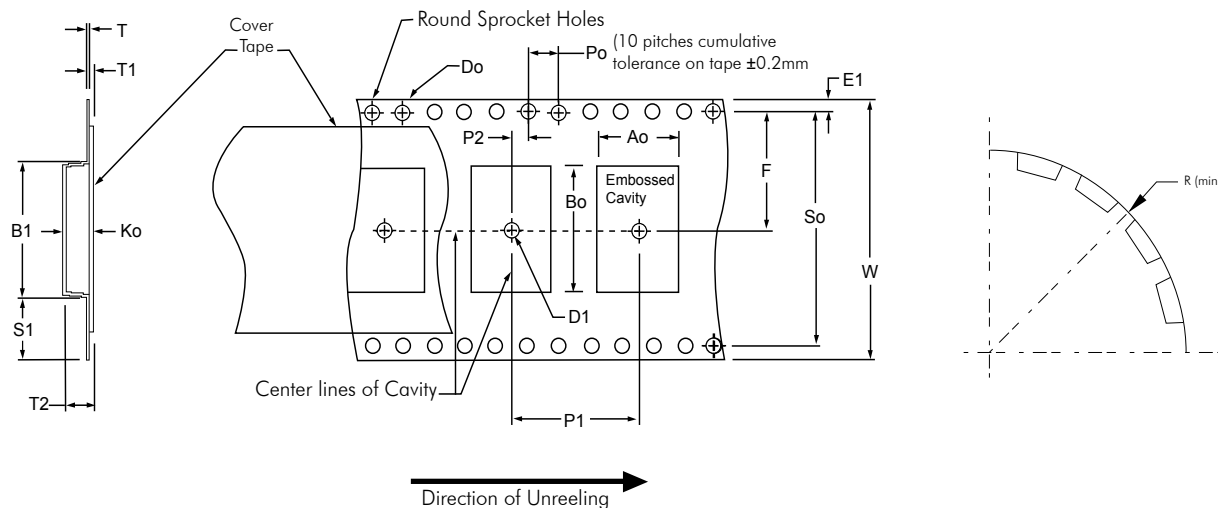

The Pocketed Carrier Tape is made of Conductive Polystyrene plus Carbon material (or equivalent). The surface resistivity is  $10^6 \text{ Ohm/sq}$  maximum. Pocket tapes are designed so that the component remains in position for automatic handling after cover tape is removed. Each pocket has a hole in the center for automated sensing if the pocket is occupied or not, thus facilitating device removal. Sprocket holes along the edge of the center tape enable direct feeding into automated board assembly equipment. See Figures 3 and 4 for carrier tape dimensions.

## Cover Tape

Cover tape is made of Anti-static Transparent Polyester film. The surface resistivity is  $10^7 \text{ Ohm/Sq}$  Minimum to  $10^{11} \text{ Ohm/sq}$  maximum. The cover tape is heat-sealed to the edges of the carrier tape to encase the devices in the pockets. The force to peel back the cover tape from the carrier tape shall be a MEAN value of 20 to 80gm (2N to 0.8N).

## Reel

The device loading orientation is in compliance with EIA-481, current version (Figure 2). The loaded carrier tape is wound onto either a 13-inch reel, (Figure 4) or 7-inch reel. The reel is made of Antistatic High-Impact Polystyrene. The surface resistivity  $10^7 \text{ Ohm/sq}$  minimum to  $10^{11} \text{ Ohm/sq}$  max.

**NOTES:**

- A<sub>0</sub>, B<sub>0</sub>, and K<sub>0</sub> are determined by component size. The cavity must restrict lateral movement of component to 0.5mm maximum for 8mm and 12mm wide tape and to 1.0mm maximum for 16,24,32, and 44mm wide carrier. The maximum component rotation within the cavity must be limited to 20° maximum for 8 and 12 mm carrier tapes and 10° maximum for 16 through 44mm.
- Tape and components will pass around reel with radius "R" without damage.
- S<sub>1</sub> does not apply to carrier width ≥32mm because carrier has sprocket holes on both sides of carrier where D<sub>0</sub> ≥ S<sub>1</sub>.
- S<sub>0</sub> does not exist for carrier ≤32mm because carrier does not have sprocket hole on both side of carrier.
